

ETWINNING PROJECT 2025/26

SUSTAIN WELL: Wellbeing, Empathy & Lifelong Learning for a Sustainable Future

Short Description:

The SUSTAIN WELL project builds upon the foundations of the first SUSTAIN initiative (Stories Uniting Students Towards Awareness, Imagination, and Nature), expanding its focus from environmental awareness to a holistic approach that integrates the **Sustainable Development Goals (SDGs)** with themes of **wellbeing, empathy, digital citizenship, and lifelong learning**. Through children's literature, creative writing, STEAM activities, and the responsible use of digital and AI tools, students will explore the 17 SDGs in a structured timeline from September to May.

The project aims to empower students to reflect on their personal and collective responsibility towards building a sustainable future, while cultivating empathy, respect for diversity, and intercultural understanding. Collaboration among schools across Europe will be at the heart of the project, allowing children to co-create shared outcomes and learn the value of teamwork and solidarity.
